

# Software Engineering Challenges in the Smart Grid

**3rd International Workshop on Software Engineering  
Challenges for the Smart Grid**

Jereme Haack

**Pacific Northwest**  
NATIONAL LABORATORY

*Proudly Operated by Battelle Since 1965*

# Overview

- ▶ Challenge Overview
  - Security
  - Simulation
  - Devices
  - Testing
  - Human Factors
- ▶ Solution
- ▶ VOLTRON Example
- ▶ Conclusion

**Pacific Northwest**  
NATIONAL LABORATORY

*Proudly Operated by Battelle Since 1965*

# Challenges

## ▶ Application Challenges

- Integrating Variable Distributed Generation
  - Wind
  - Solar
- Integrating Storage at multiple layers
- Integrating Electric Vehicles
- Managing End-Use Loads
  - Residential
  - Commercial
  - Industrial
- Enabling energy coordination and trading between buildings

## ▶ Technology Challenges

- Rapid Deployment Of Networked (Grid, Buildings, ...) Sensors And Controllers
- Scalable control and diagnostics
- Security

**Pacific Northwest**  
NATIONAL LABORATORY

*Proudly Operated by Battelle Since 1965*

# Challenges

- ▶ Large amount of data generated by sensors goes unutilized due to high volume. Off-line analysis helps but is insufficient.
- ▶ Appliances/devices unable to coordinate energy usage due to proprietary solutions and lack of underlying distributed control algorithms and platforms.
- ▶ Growing ownership of Electric Vehicles will increase effect of load peaks
  - Increase in energy market purchases
  - Increase in maintenance due to equipment stress (e.g. transformers)
- ▶ Require techniques to better integrate renewables at all scales: Rooftop PV to Wind Farms, to Energy Storage
- ▶ Agent Based approach is a natural fit for this area, but
  - Agent based energy efficiency solutions often do not progress beyond simulation

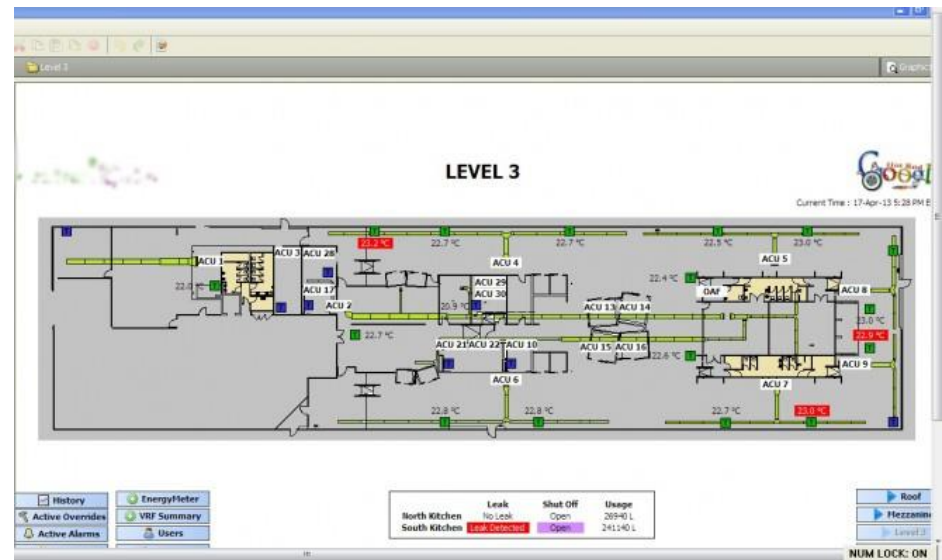

**Pacific Northwest**  
NATIONAL LABORATORY

*Proudly Operated by Battelle Since 1965*

# Security Failure

- ▶ Researchers hacked Google building in Australia
- ▶ Control systems accessible over internet
  - Unpatched
  - Hardcoded passwords
- ▶ Target data breach caused by stolen credentials from third party controls vendor

# Simulation vs. Reality

- ▶ VOLTRON hardware demo
  - Algorithm worked perfectly in simulation
  - Initially failed when applied to real systems
- ▶ Potential stumbling blocks
  - Perfect knowledge
  - Time steps
  - Lack of diversity
  - Hidden factors

**Pacific Northwest**  
NATIONAL LABORATORY

*Proudly Operated by Battelle Since 1965*

# Interacting with Devices

- ▶ Proprietary Protocols
  - Vendors don't necessarily have incentive to be open
- ▶ Lack of standards or too many standards
  - Communicating with multiple devices could require speaking multiple protocols
- ▶ Device-specific characteristics
  - Time-scale
  - Responsiveness
  - Available information
  - Critical priority

**Pacific Northwest**  
NATIONAL LABORATORY

*Proudly Operated by Battelle Since 1965*

# Testing and Verification

- ▶ Back to simulation vs. reality problem
  - Testing applications without access to appliances
  - Testing at scale
  - Test coverage, edge cases
- ▶ Who watches the watcher
  - Software and hardware responsibilities for safe operation

**Pacific Northwest**  
NATIONAL LABORATORY

*Proudly Operated by Battelle Since 1965*

# Human Factor

- ▶ Utility Operators
  - Conservative
  - Risk Averse (for good reason)
- ▶ Vendors
  - Does it help them sell appliances?
- ▶ Consumers
  - Lower bill
  - No decrease in quality of service
- ▶ Other developers
  - Ease of use
  - Power

# Technology Solution Attributes

- ▶ Open, flexible and modular software platform
  - Ease of application development
  - Interoperable across vendors and applications
  - Hides power and control system complexities from developers
  - Object oriented, modern software development environment
  - Language agnostic. Does not tie the applications to a specific language such as Java
- ▶ Broad device and control systems protocols support built-in
  - ModBUS, BACNet, and others
  - Multiple types of controllers and sensors
  - Low CPU, memory and storage footprint requirements
  - Supports non-Intel CPUs
- ▶ Secure
  - Security libraries and cryptography built-in
  - Manage applications to prevent resource exhaustion (CPU, memory, storage)
  - Robust against denial-of-service (e.g. does not crash when scanned via NMAP)
  - Supports modern application development environments

**Pacific Northwest**  
NATIONAL LABORATORY

*Proudly Operated by Battelle Since 1965*

# Managing Load on Distribution Transformer

- ▶ One distribution transformer serving residential neighborhood
- ▶ Multiple electric vehicles per household
- ▶ 107 degree day
- ▶ Goal: Keep the transformer temperatures below a desired threshold to extend lifetime and reduce risk of fault
- ▶ Use VOLTTRON to coordinate EV charging and other load behavior across residences to:
  - Keep aggregate power used by multiple residences below a limit related to transformer temperatures
  - Give priority to vehicles that need to leave soon (e.g. pick up kids from soccer)
  - Temporarily absorb start-up demand from A/C compressors and motors.

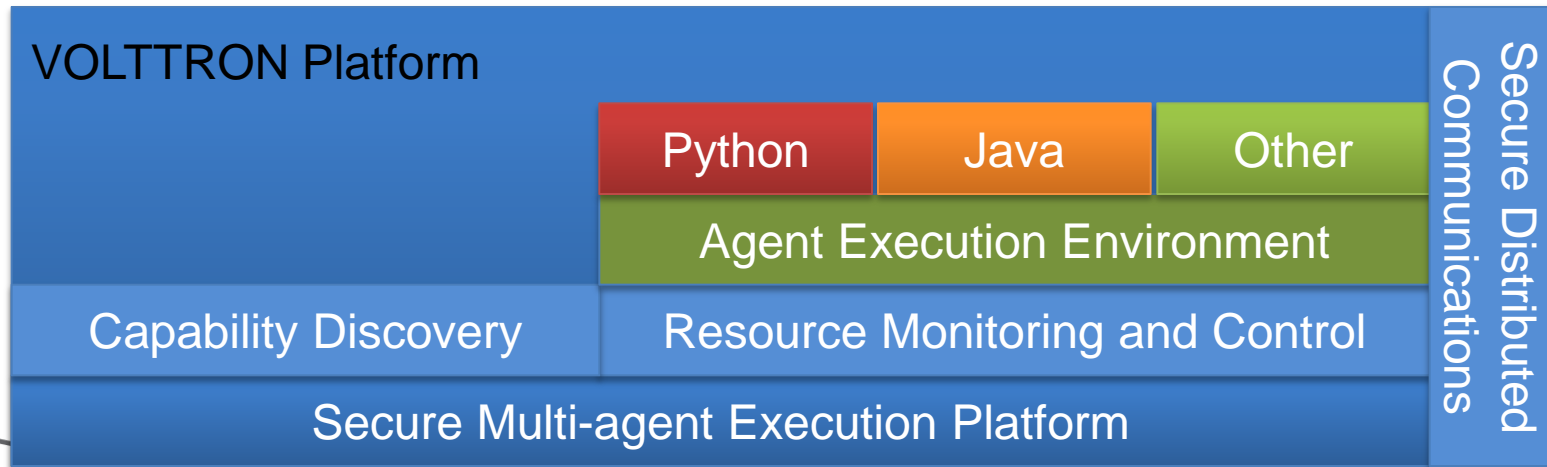

**Pacific Northwest**  
NATIONAL LABORATORY

*Proudly Operated by Battelle Since 1965*

# Approach: VOLTTRON™ Platform

- ▶ VOLTTRON is a software platform for next generation distributed control applications for integrating buildings and power grid
  - Proven through simulation, prototypes and field deployments
  - Flexible, Modular and Language-agnostic
  - Open-source, easy to extend, already being used by external collaborators
  - Maintain security and manage platform resources
  - Services for applications to find each other

# VOLTRON Success Stories

- ▶ Ideal platform for Department of Energy to use for transactive energy research and demonstrations
- ▶ Enables decentralized, distributed or hierarchical control applications with fast, and easy code development
- ▶ Demonstrated with real hardware
  - Hardware testbed
  - EV Charging coordination at PNNL SmartHomes
  - Transactional Network Program
- ▶ Downloaded and used by:
  - Virginia Tech
  - LBNL
  - ORNL
- ▶ Funded by PNNL's Future Power Grid Initiative

**Pacific Northwest**  
NATIONAL LABORATORY

*Proudly Operated by Battelle Since 1965*

# Conclusion

- ▶ Business as usual is not an option
- ▶ We have solutions, but they must transition to real world applications
- ▶ Great opportunities but great challenges and responsibility

**Pacific Northwest**  
NATIONAL LABORATORY

*Proudly Operated by Battelle Since 1965*

# VOLTTRON Info

- ▶ Open Source
- ▶ Active development
- ▶ <https://github.com/VOLTTRON/volttron/wiki>
- ▶ `volttron@pnnl.gov`
